

Assistant & Inspector Guide

How to access, navigate, and use **admin.roofinspector.app** alongside the iPhone app.

Version 1.1 · April 2026

1. What is the web portal?

The portal is the desktop companion to the Roof Inspector iPhone app. Inspectors capture photos and notes in the field; the portal lets you (or an assistant) finalise reports, edit details, generate PDFs, email customers, and manage your customer list — all from a browser on a laptop.

Customers

PDF reports

Email delivery

Account sharing

2. Before you start

You need	Details
A modern browser	Chrome, Edge, Safari, or Firefox on a laptop or desktop.
Your portal email	The email the inspector invited (e.g. your work address).
Email access	You sign in via a magic link sent to your inbox — no password.

3. Sign in for the first time

1 Open the portal. Go to <https://admin.roofinspector.app>.

2 Enter your email and click *Send magic link*.

3 Open your inbox and click the “Sign in to Roof Inspector” link from `noreply@roofinspector.app`.

If you don't see it within a minute, check Junk / Spam. The link is good for 1 hour.

4 You're in. The first time you sign in, your account is registered automatically.

Assistants: the inspector cannot grant you access until you have signed in *at least once* with your email. Sign in first, then tell the inspector you're ready to be invited.

4. How the inspector grants you access

This is a one-time step performed by the account owner (the inspector).

- 1 Inspector signs in to admin.roofinspector.app.
- 2 Clicks **Sharing** in the top navigation.
- 3 Types the assistant's email, picks a role:
 - **Editor** — can view and edit inspections, customers, and photos.
 - **Viewer** — read-only.
- 4 Clicks **Invite**. A row appears under *People with access*.
- 5 The assistant signs out and back in — they will now see the inspector's data alongside their own.

5. The dashboard

After signing in you land on the inspections list. Each row shows:

- **Address** — the property inspected.
- **Customer** — the contact for the report.
- **Date** — when the inspection took place.
- **Status** — Draft, In review, or Sent.

Click any row to open the inspection.

6. Editing an inspection

- 1 **Open** the inspection from the dashboard.
- 2 **Edit** the address, customer, summary notes, and individual photo annotations. Each photo can have a caption, severity (None / Low / Medium / High), and a note.
- 3 **Save** — changes sync back to the inspector's iPhone app automatically.

Photos are taken in the field — assistants normally don't add new photos, only refine the captions, severity, and notes.

7. Generating a PDF report

- 1 Open the inspection.
- 2 Click **Download PDF** (top right of the inspection page).
- 3 The PDF opens in a new tab. Save it locally or email it.

The PDF is branded with the inspector's company logo, name, and contact details (set in *Company Profile*), and includes:

- Cover page with property address, customer, and date.
- Summary section with overall condition.
- Photo grid with captions, severity badges, and notes.
- Quote table with line items and totals (if present).

8. Emailing the report to the customer

- 1 Open the inspection.
- 2 Click **Email Report**.
- 3 Confirm the customer's email address and edit the message if needed.
- 4 Click **Send**. The customer receives the PDF as an attachment from `noreply@roofinspector.app` with the inspector's name in the signature.

Once sent, the inspection status moves to **Sent**. You can re-send if needed.

9. Customers tab

The Customers tab is your address book — name, email, phone, address. Use it to:

- Add a new customer before creating an inspection for them.
- Update contact details (the iPhone app sees the change immediately).
- Search by name or email.

10. Sharing tab (account owners only)

For inspectors who want a colleague to help with reports.

- **People with access** — current assistants, with their role and date granted.
- **Invite by email** — type the assistant's email and pick a role.

- **Revoke** — instantly removes their access. They'll see only their own data on next page load.

11. Troubleshooting

Problem	Fix
Magic link email never arrives	Check Junk/Spam. Confirm you typed the email correctly. Try again — links expire after 1 hour.
Invite says “hasn't signed in to the portal yet”	The assistant must visit admin.roofinspector.app and sign in <i>once</i> first. Then re-invite.
Assistant doesn't see the inspector's data	Sign out and back in. Sharing takes effect on next sign-in.
PDF download fails	Refresh the inspection page and try again. If it still fails, contact support.
Photos look low-resolution in the PDF	Check that the iPhone app finished syncing on Wi-Fi (Settings → Sync now).

12. Security & privacy

- Sign-in is passwordless — only people with access to your inbox can log in as you.
- Assistants only see data for inspectors who have explicitly invited them.
- All data is stored encrypted at rest in Supabase (EU region).
- Photos are served via short-lived signed URLs — they cannot be shared by copying the link.

13. Quick reference

Action	Where
Sign in	admin.roofinspector.app
See all inspections	Inspections (top nav)
Edit an inspection	Click the row → edit fields → Save
Download a report	Inspection → Download PDF
Email a customer	Inspection → Email Report
Add or update customers	Customers (top nav)
Invite an assistant	Sharing (top nav, owner only)
